"Passages" is a classic book about confronting the changes of middle age, and the author has a no-nonsense style that is really refreshing. It was very helpful to hear how many people who reach middle age (whenever that is) have many of the same confusing and upsetting feelings, how we're not nuts, and how there IS light at the end of the tunnel. However, having said that, this book seemed quite dated to me. It was written in the 1970s when it was still the norm for women to marry in their early 20's without any career training, a college education, or any experience with independent living. The crises that these women confronted in middle age are a bit different than

modern women face, since many modern women have achieved quite a bit of independence before establishing a relationship with a partner, or choosing to remain single. Also, I found the discussion of men's lives reflected the 1970's social norms as well, i.e. that most men followed the traditional business-career route, and were pretty sexist in their attitudes towards their wives. This social bias is reflected in her discussion of difficulties that couples face during various stages of their lives. Some of the psychological research the author referred to is quite out of date as well. Still, I think the author presented some great insights about the feelings that many middle aged people experience, and despite the somewhat dated psychological and social perspectives, this book is really worth reading, particularly if you just skim over the outdated stuff. One thing that really struck me is how much our modern view of when "middle age" occurs differs from what the author presented in her book. She described people beginning to confront "middle age" around age 35.
