Synopsis

Acclaimed for its innovative use of visual material, this book is engaging, clear, and compellingâexactly how an effective map should be. Nearly every page is organized around maps and other figures (many in full color) that illustrate all aspects of map making, including instructive examples of both good and poor design choices. The book covers everything from locating and processing data to making decisions about layout, symbols, color, and type. Readers are invited to think critically about both the technical features and social significance of maps as they learn to create better maps of their own.ÂNew to This Edition*Extensively revised and expanded core chapters on map design.*An annotated map design exemplar is used to show how the concepts in each chapter play out on an actual map.*Updated to reflect current technological developments.*Larger size and redesigned pages make the book even more user friendly.

Customer Reviews

The way this book is set up is very unusual for a textbook and this makes it a very enjoyable read. It would be very easy to just lay out all the concepts in a way that would bore readers to tears but this book goes above and beyond and explains concepts in a highly entertaining way that makes you understand and remember. It is a very good and thorough overview of what needs to be considered when making maps. In addition, if you are going deep into the field it has lots of book suggestions to build up your geographic library. Unlike another reviewer, I highly recommend this book for those who are in the beginning process of learning GIS/cartography (or if you are just a geo-geek).

This book is a great resource for cartography. I highly suggest it. I don't love some of the formatting, but the content is excellent.

Excellent. Received Quickly.
