Veterinary Ocular Pathology: A Comparative Review, 1e

Synopsis

Veterinary Ocular Pathology: A Comparative Review links the clinical features of ocular disease with gross and microscopic pathology to demonstrate the essential features observable during diagnosis. It is designed to be kept next to the microscope as an invaluable guide to accurate diagnosis in ocular pathology. The book presents a wide range of images of the highest quality. A unique and distinctive feature is the juxtaposition of clinical and pathological images while offering detailed enumeration of the diagnostic features. Expert comparative comments by Dr Daniel Albert and contextual information on relative incidence are provided throughout. The authors address spontaneous disease of the eye in all animal species, with a particular emphasis on companion species. In addition, specific, common or interesting conditions of exotic species are included. A convenient, comprehensive and easy-to-use reference for veterinary pathologists, veterinary ophthalmologists, students and comparative vision scientists. The first text devoted to the pathology of spontaneous diseases of the eyes and periocular tissues of domestic animal species. Exceptionally high quality illustrations are presented throughout, demonstrating clinical features, gross pathology and histopathology. Written by pathologists and clinicians. Includes a chapter devoted to the pathology of conditions associated with glaucoma in domestic animals.

Book Information

Hardcover: 472 pages

Publisher: Saunders Ltd.; 1 edition (June 1, 2010)

Language: English

ISBN-10: 0702027979

ISBN-13: 978-0702027970

Product Dimensions: 8.8 x 1.1 x 11 inches

Customer Reviews

I have long waited for this well written and informative textbook on veterinary ocular pathology. While there is ocular pathology inserted into several textbooks (both ophthalmology and pathology

textbooks), there have been few (Saunders' Atlas) dedicated only to the ocular pathology of domestic animals. The photographs and photomicrographs are stunning and in full color. The text is mostly outline style and easy to read especially for those studying for the veterinary ophthalmology or veterinary pathology boards. It is also an informative reference text for the general practitioner or boarded pathologist and/or ophthalmologist. In addition, the subject matter is relevant to those who teach ocular pathology to veterinary students and no school or college of veterinary medicine should be without one.

There is little information on ocular pathology of the horse, and some terminology used by pathologists is not used by veterinary ophthalmologists. The book is however blessed with a good format and many good quality images.
